START HERE

Enter the AEDC Data Explorer by clicking the 'Data' tab[1].

A **Guide to the AEDC Data Explorer** is also available[2].

Enter a Community or Local Community name then click 'Search'.
Refine by:

'Refine by:' options let you select and report on multiple Local Communities within a Community.

YEARS ○ 2009 ○ 2012 ● 2015 ○ Compare years

Choose a single AEDC year to report on, or choose 'Compare years' to view changes over time.

North Sydney Community overview
Community profile: [PDF] [WORD]

Community results for the AEDC can be exported as a Community Profile (in PDF or Word).

Data can be viewed as tables, maps, or graphs – see ❶ ❷ ❸ for more details.
☑ Percentile bands

Select show/hide 'Percentile bands'.

The 'Export selected results' button enables you to export the results of your search in either Excel or PDF.

Additional data products

Additional AEDC data products are available to download once you have created an AEDC user account.

These additional data products include AEDC data available as public tables at Local Government Area (LGA), Statistical Area 2 (SA2) and Statistical Local Area (SLA) levels. GIS data is also available for each State and Territory.
---

❶ [Tables] [Maps] [Graphs]

Colour coding **(A)** indicates if a change in vulnerability across any two data collections for a Community/Local Community is significant or not. A significant increase in the percentage of children developmentally on track is a positive change, while an increase in percentage of children developmentally at risk and vulnerable is a negative change.

Hover **(B)** over the info symbols ⓘ to see a definition of each of the five AEDC domains and two summary indicators.

1. Or simply visit: **www.aedc.gov.au/data**
2. **www.aedc.gov.au/ugde**

❷ [Tables] [Maps] [Graphs]

The interactive Maps section allows you to produce a map-based report using AEDC and ABS Census 2011 data.

Map display **(C)** can be customised to show AEDC population data, AEDC data on developmental vulnerability, 2011 ABS Census data, and **(D)** schools and early learning centers.

Hover your cursor **(E)** over a Local Community to see more information about that community.

Maps can also be downloaded as GIS shapefiles **(F)** and as PNG image files **(G)**.

❸ [Tables] [Maps] [Graphs]

The Graphs view lets you generate graphs based on domain results by AEDC collection year. Graphs are displayed dynamically, based on the report options you select.

The 'Export graph' function **(H)** is useful if you want to use AEDC graphs in a publication or similar resource (such as presentation slides).

Graphs are customisable **(I)** and can display domain and contextual data at different geographical levels.
